

Resolution for 2025 IOMICA AGM from France NCA.

Add F.2.4(e) : Kicking strap should pass through a 10 mm ring gauge except for max 35 mm length which should pass in a 20 mm ring gauge.

Reasoning : We see increasing proposals of complex kicking straps including additional sailing area which is not normal use of a kicking strap. We have a limitation (F.2.4.d ) for goosenecks, we need a limitation as well for kicking straps. There is no grandfathering clause for rigs, so this will affect current Viss owners, and maybe other similar existing solutions which will have to be modified. Other proposal voted at last AGM then blocked by IRSA before MoU signature is just about 20 mm ring gauge, we consider it's not going far enough and allows quite complex shapes out of reach for amateur builders for a part that should be very simple on IOMs.
